Significance:

This practical demonstrates double displacement reactions, crystallization techniques, and qualitative analysis, reinforcing concepts of chemical reactions and salt preparation.

- Determination of the Water of Crystallization in a Salt

Objective:

To determine the percentage of water of crystallization in hydrated copper sulfate ($\text{CuSO}_4 \cdot x\text{H}_2\text{O}$).

Apparatus and Chemicals:

- Crucible and lid
- Bunsen burner
- Analytical balance
- Hydrated copper sulfate crystals

Procedure:

- Weigh a small amount of hydrated CuSO_4 .
- Heat the sample in a crucible until the water is driven off, indicated by a color change from blue to white.
- Allow to cool in a desiccator and reweigh.
- Calculate the percentage of water lost.

Calculation:

$$\% \text{ Water of crystallization } (\%) = \frac{\text{Mass of water lost}}{\text{Original mass of hydrate}} \times 100$$

Educational Value:

This experiment elucidates concepts of stoichiometry, molar mass, and the structure of crystalline

salts. It also introduces students to dehydration and thermal stability of hydrates.

- Organic Compound Identification via Functional Group Tests

Objective:

To identify the presence of specific functional groups in organic compounds such as alcohols, aldehydes, or carboxylic acids.

Typical Tests:

- Test for Aldehydes: Fehling's solution (blue) reacts to produce a brick-red precipitate.
- Test for Alcohols: Reaction with sodium metal produces hydrogen gas.
- Test for Carboxylic Acids: Effervescence with carbonate salts, or pH test showing acidity.

Significance:

These qualitative tests hone students' ability to recognize organic functional groups, essential for understanding organic synthesis, reactions, and mechanisms.

- Preparation of a Sample Organic Compound

Objective:

To synthesize an organic compound such as acetanilide or urea via simple laboratory procedures.

Procedure:

- For example, preparing acetanilide involves acetylation of aniline using acetic anhydride.
- The process demonstrates concepts of nucleophilic substitution and acylation.

Importance:

This practical introduces students to organic synthesis, purification techniques like recrystallization, and the importance of reaction conditions.
