Working Principles of Solo Water Level Automation Systems

Sensing Water Levels

The core of any water level control system is its sensors, which detect the current water level. Common types include:

- **Float Switches:** Mechanical switches activated by buoyant floats
- **Ultrasonic Sensors:** Emit ultrasonic waves to measure distance to water surface
- **Capacitive Sensors:** Detect changes in capacitance caused by water presence
- **Pressure Transducers:** Measure hydrostatic pressure at the tank bottom

Control Logic and Decision Making

Once the sensor detects the water level, the controller (usually a PLC or microcontroller) processes this data against predefined thresholds:

- Low-level threshold: triggers the pump to start filling
