Sample Answers to Common CCTV Technician Interview Questions

To give you an idea of how to craft effective responses, here are sample answers to some common questions.

Q: Can you explain the difference between analog and IP-based CCTV systems?

Analog CCTV systems transmit video signals over coaxial cables and typically offer lower resolution, suitable for basic surveillance needs. IP-based systems, on the other hand, use network infrastructure to transmit digital video data, allowing for higher resolution, remote access, and easier scalability. I have experience installing and configuring both types, ensuring optimal performance based on client requirements.

Q: How do you troubleshoot a CCTV system that is not recording footage?

First, I verify that the camera is powered and connected correctly. Then, I check the network connectivity and ensure the DVR/NVR is functioning properly. I review system logs for errors and test the storage device for faults. If necessary, I update firmware, reset configurations, or replace faulty hardware. For example, in my previous role, I resolved a similar issue by replacing a failing hard drive, restoring the recording functionality promptly.

Q: Describe a challenging installation and how you handled it.

Once, I was tasked with installing a CCTV system in a high-rise building with limited access points. The challenge was running cables through confined spaces and ensuring minimal disruption. I coordinated with the building management to schedule work during off-hours and used flexible conduit to navigate tight spaces. I also employed wireless cameras where wiring was impractical. The project was completed successfully, and the client was pleased with the unobtrusive setup and reliable coverage.
