- Catalytic converter and muffler reduce emissions and noise.

Detailed Breakdown of the 4G13 Diagram

Understanding the diagram involves recognizing how these components fit together and operate in harmony.

Placement of Major Components

- The cylinder head sits atop the cylinder block, housing the valves, camshaft, and spark plugs.
- The crankshaft runs along the bottom of the block, connected to the pistons via connecting rods.
- The timing belt or chain connects the crankshaft sprocket to the camshaft sprocket to coordinate valve timing.
- The fuel injectors or carburetor feed the mixture into the intake manifold or directly into the combustion chambers.
- The ignition coil produces the high voltage needed for spark plugs, which ignite the mixture.

Flow of Air, Fuel, and Exhaust

- Air intake enters through the air filter and passes into the intake manifold.

- Fuel is injected or mixed with air in the carburetor.
- The air-fuel mixture enters the combustion chamber via the intake valves.
- Combustion occurs when the mixture is ignited by the spark plug.
- Exhaust gases exit through the exhaust valves into the exhaust manifold and out through the muffler.

Cooling and Lubrication Pathways

- Coolant circulates through passages in the cylinder head and block, absorbing heat.
- The water pump circulates coolant, while the thermostat regulates flow based on temperature.
- Engine oil is pumped through galleries to lubricate moving parts, reducing friction and wear.
