- Spark Plug: Ignites the air-fuel mixture in the engine.
- Starter Motor: Engages to turn the engine during startup.
- Fuses and Relays: Protect the system from overloads and control power distribution.
- Switches: Handle functions like lights, indicators, and horn.

Understanding how these components are wired is central to diagnosing issues or customizing the

scooter's electrical features.

Basic Layout of the Yamaha T105 Wiring Diagram

The wiring diagram of the Yamaha T105 is a schematic representation of electrical connections among various components. It uses standardized symbols for switches, connectors, wires, and electrical devices.

Main Wiring Routes

The wiring can be broadly categorized into:

- Power Circuit: From the battery through the ignition switch to various electrical accessories.
- Lighting Circuit: Headlights, tail lights, indicators, and brake lights.
- Ignition Circuit: Ignition coil, spark plug, CDI (Capacitor Discharge Ignition), and related switches.
- Charging Circuit: Stator, rectifier/regulator, and battery charging systems.
- Starter Circuit: Starter relay, starter motor, and associated wiring.

Understanding these routes helps in tracing faults or modifying specific functions.

Detailed Components and Wiring Connections

Battery Connection

The battery's positive terminal connects to the ignition switch, which acts as the main control point for powering the electrical system. The negative terminal is grounded to the chassis.

- Positive Terminal: Connects through the main fuse to various circuits.
- Negative Terminal: Grounded to the frame, completing the circuit.

Ignition Switch

The ignition switch has multiple positions: OFF, ON, and START.

- OFF Position: Disconnects power to the ignition and lighting circuits.
- ON Position: Powers the ignition system, lights, and accessories.
- START Position: Activates the starter relay to engage the starter motor.

The wiring diagram shows the switch with multiple terminals, each connected to different circuits.

Stator and Regulator/Rectifier

The stator generates alternating current (AC) when the engine runs. This AC power is routed to the regulator/rectifier, which converts AC to direct current (DC) suitable for charging the battery and powering DC components.

- Stator Winding: Multiple wires (often yellow) connect to the rectifier.
- Regulator/Rectifier: Connects to the battery, ignition switch, and ground.

Lighting System Wiring

Headlights, tail lights, turn signals, and brake lights are wired in parallel to the power source, controlled via switches and relays.

- Headlights: Connect to the switch and power supply, grounded on the chassis.
- Turn Signals: Controlled via a switch and flasher relay.
- Brake Lights: Triggered by brake switch, wired to the tail light circuit.

Ignition Coil and Spark Plug

The ignition coil receives power from the CDI unit, which is triggered by the flywheel sensor and the ignition switch. High-voltage output from the coil is routed to the spark plug via the ignition cable.

Starter System Wiring

The starter relay is activated when the starter button is pressed, completing the circuit from the battery to the starter motor.

Common Wiring Diagram Symbols and Their Meanings

Understanding schematic symbols is crucial for interpreting the wiring diagram accurately:

- Battery: Usually depicted as a pair of parallel lines of different lengths.
- Switches: Represented as a break in the line with a lever symbol.
- Relays: Usually shown as a box with coil and switch contacts.
- Connectors: Circles or squares indicating connection points.

- Ground: A line with three descending lines or a triangle pointing downward.

Familiarity with these symbols allows for easier tracing of wiring issues and comprehension of the schematic.
