The Kinetic and Dynamic Analysis

Once the kinematic framework is established, the focus shifts to forces and energy:

- Kinetic analysis: Evaluates the forces acting on components to produce the observed motion.
- Dynamic analysis: Considers inertial effects, damping, and external forces to predict how mechanisms respond under real-world conditions.

Dynamic Forces in Machinery

Understanding forces such as:

- Inertial forces: Due to acceleration of masses.
- Centrifugal and Coriolis forces: Relevant in rotating systems.
- Frictional forces: Affecting motion and energy efficiency.

The Role of Damping and Vibrations
