## Understanding Chapter 23 of Intermediate Accounting 13th Edition

### Overview of the Chapter

Chapter 23 focuses on the accounting for investments in debt and equity securities. It discusses how companies should report these investments on their balance sheets and income statements, depending on the classification and intent of the investment. The chapter emphasizes the importance of fair value measurement, impairment considerations, and the recognition of unrealized gains and losses.

Key topics covered include:

- Classification of investments (held-to-maturity, trading, available-for-sale)
- Initial recognition and measurement
- Subsequent measurement and fair value adjustments
- Impairment of investments
- Sale and disposal of investments
- Equity method investments

### Why Understanding Chapter 23 Solutions Matters

Mastering the solutions to problems in Chapter 23 enables students to:

- Apply theoretical concepts to real-world scenarios
- Prepare accurate financial statements involving investments
- Understand the implications of different investment classifications
- Comply with accounting standards such as ASC 320 (Financial Instruments?Investments) and ASC 321 (Investments?Equity Securities)

## Key Concepts and Principles in Chapter 23

### 1. Classification of Investments

Investments are categorized based on the company's intent and the nature of the securities:

- Held-to-maturity (HTM): Debt securities that the company intends and is able to hold until maturity. These are recorded at amortized cost.
- Trading securities: Debt or equity securities bought primarily for short-term profit. These are recorded at fair value, with unrealized gains and losses included in earnings.
- Available-for-sale (AFS): Securities not classified as HTM or trading. These are recorded at fair value, with unrealized gains and losses reported in other comprehensive income.

### 2. Recognizing and Measuring Investments

- Initial recognition occurs at fair value plus transaction costs.
- Subsequent measurement depends on classification:
  - HTM: Amortized cost
  - Trading & AFS: Fair value, with unrealized gains/losses adjusted accordingly

### 3. Impairment of Investments

- When the fair value falls below amortized cost or carrying amount, an impairment loss is recognized.
- The loss is recognized in earnings (for HTM and trading securities) or in other comprehensive income (for AFS securities), depending on the circumstances.

### 4. Sale and Disposal

- Gains or losses are recognized when securities are sold.
- The sale affects the classification and measurement of remaining securities.

## 5. Equity Method of Accounting

- Applied when an investor has significant influence (generally 20% to 50% ownership).
- The investment is initially recorded at cost.
- The investor recognizes its share of the investee's earnings or losses, adjusting the carrying amount accordingly.

## Step-by-Step Guide to Solving Chapter 23 Problems

### Step 1: Determine the Investment Classification

Identify whether the security is classified as held-to-maturity, trading, or available-for-sale based on management's intent and the nature of the security.

### Step 2: Record Initial Purchase

- Debit: Investment in securities
- Credit: Cash
- Include transaction costs in the purchase price if applicable.

### Step 3: Record Subsequent Measurement

- For HTM: Use amortized cost method.
- For Trading and AFS: Adjust fair value at each reporting date.
- Recognize unrealized gains or losses accordingly.

### Step 4: Recognize Impairments

- Assess whether the decline in fair value is other-than-temporary.
- Record impairment loss in earnings or other comprehensive income.

### Step 5: Record Sale or Disposal

- Remove the security from the books.
- Recognize any realized gain or loss based on the difference between sale proceeds and carrying amount.

## Step 6: Applying the Equity Method

- Adjust the investment account for the investor's share of the investee's net income or loss.
- Record dividends received as a reduction of the investment account.

## Common Problems and Solutions in Chapter 23

### Problem 1: Recording Purchase of Securities

Scenario: A company purchases 1,000 shares of stock for \$50 each, paying \$2,000 in transaction costs.

Solution:

- Calculate total purchase price:  $1,000 \text{ shares} \times \$50 = \$50,000$
- Add transaction costs: \$2,000
- Record:
  - Debit: Investment in securities \$52,000
  - Credit: Cash \$52,000

### Problem 2: Fair Value Adjustment for Trading Securities

Scenario: At year-end, trading securities are valued at \$55,000, but the book value is \$50,000.

Solution:

- Determine unrealized gain:  $\$55,000 - \$50,000 = \$5,000$
- Record:
  - Debit: Fair value adjustment (Trading Securities) \$5,000
  - Credit: Unrealized gain (Income) \$5,000

### Problem 3: Recognizing Impairment

Scenario: An available-for-sale security's fair value drops from \$30,000 to \$20,000, and the decline

is deemed other-than-temporary.

Solution:

- Recognize impairment loss:
- Debit: Unrealized loss on AFS securities \$10,000
- Credit: Investment in securities \$10,000

## Tips for Mastering Chapter 23 Solutions

- Understand the classifications: Knowing whether securities are HTM, trading, or AFS is crucial.
