-
- Designing Goods and Services

One of the initial steps in operations management is deciding what to produce and how to produce it. Stevenson discusses the distinction between goods and services, highlighting their unique characteristics.

Differences Between Goods and Services:

- Goods: Tangible, can be stored, standardized.
- Services: Intangible, produced and consumed simultaneously, variable.

Design decisions in this phase influence process selection, capacity planning, and quality control. The author underscores the importance of aligning product design with customer expectations and operational capabilities.

- Process Strategy and Design

Process strategy involves determining the appropriate methods and technologies to produce goods or services efficiently. Stevenson explores various process types:

- Job Shop: Customization, low volume.
- Batch Process: Moderate volume, flexibility.
- Line Flow: High volume, standardized.
- Continuous Flow: Very high volume, highly automated.

Choosing the right process depends on factors like product variety, volume, and quality requirements. Process design also considers automation, layout, and technology integration.

- Capacity Planning

Capacity planning ensures that an organization can meet demand without excessive idle resources or shortages. Stevenson discusses methods for measuring capacity, forecasting demand, and adjusting capacity through expansion, reduction, or flexibility measures.

Key Techniques:

- Capacity requirements planning (CRP)
- Little's Law for understanding throughput
- Equipment and labor considerations

Efficient capacity planning balances customer service levels with cost minimization.
