Security Administration in SAP NetWeaver

Security is a critical aspect of SAP NetWeaver administration, especially given the sensitive business data involved. The handbook dedicates extensive sections to establishing a secure environment.

Key Security Tasks:

- User and Role Management: Creating, maintaining, and assigning roles with least privilege principle.
- Authorization Objects: Fine-grained access control.
- Single Sign-On (SSO): Simplifying user access while maintaining security.

- Secure Network Communications: Configuring SSL/TLS for encrypted data transfer.
- System Audit and Logging: Tracking user activity and system changes.
- Patch Management: Applying security patches promptly to mitigate vulnerabilities.
- System Hardening: Disabling unnecessary services, configuring firewalls, and securing operating system layers.

Best Practices:

- Regularly review user access rights
- Use strong password policies
- Enable audit logging and analyze logs periodically
- Implement multi-factor authentication where possible
- Keep systems up-to-date with latest patches

By following these guidelines, administrators can significantly reduce the attack surface and ensure compliance with security standards.

Backup, Recovery, and System Maintenance

Ensuring data integrity and system availability relies heavily on sound backup and recovery strategies.

Backup Strategies:

- Database Backup: Full, incremental, and differential backups tailored to workload.
- System Backup: File system and configuration backups.
- Data Consistency: Using tools like BRTOOLS (for Oracle) or SAP BRTools for other databases.
- Scheduling and Automation: Regular backup schedules with alerts for failures.

Recovery Procedures:

- Restoring databases from backups
- Recovering system components after failure
- Performing point-in-time recovery
- Cloning systems for testing or disaster recovery

Maintenance Activities:

- Applying patches and support packages
- Performing system upgrades
- Managing transports between systems
- Cleaning and archiving logs to optimize performance

The handbook stresses testing backup and recovery procedures regularly to ensure readiness in emergencies.

Transport Management and System Copying

Moving changes across SAP landscapes is managed through transport systems, pivotal for maintaining consistency across development, testing, and production environments.

Transport System Essentials:

- Transport routes setup
- Transport requests creation and management
- Transport logging and tracking
- Managing transport layers and buffers

System Copying and Cloning:

- Creating copies of SAP systems for testing or DR
- Using SAP System Copy tools or database-specific utilities
