Occupational Therapy Washing and Dressing Activity Analysis: A Comprehensive Review

Occupational therapy (OT) plays a pivotal role in enabling individuals with physical, cognitive, or developmental challenges to regain independence in daily activities, notably in personal hygiene and dressing. Among these fundamental activities, washing and dressing are often focal points in therapy, serving as both functional skills and indicators of overall health and well-being. Analyzing these activities through a systematic approach allows therapists to identify barriers, develop targeted interventions, and monitor progress effectively.

Understanding Washing and Dressing in Occupational Therapy

Washing and dressing are complex, multi-step activities that involve motor skills, cognitive processes, sensory integration, and emotional regulation. They are essential for personal hygiene, social participation, and self-esteem. In the context of OT, these activities are viewed not merely as routine tasks but as functional skills requiring assessment and tailored intervention.

Key Components of Washing and Dressing Activities:
