Common Topics and Sample CCNA 2 Questions

- Routing Protocols and Their Characteristics

Routing protocols are at the core of dynamic routing. CCNA 2 emphasizes understanding how different protocols function, their advantages, and their configurations.

Sample Question:

Which routing protocol uses hop count as its metric?

Answer:

RIP (Routing Information Protocol)

Explanation:

RIP is distance-vector protocol that determines the best path based on hop count, with a maximum of 15 hops.

- VLANs and Trunking

VLANs segment networks logically, enhancing security and reducing broadcast domains. Trunking allows multiple VLANs to traverse a single physical link.

Sample Question:

What protocol is used to negotiate trunk links between switches?

Answer:

DTP (Dynamic Trunking Protocol)

Explanation:

DTP automates the configuration of trunk links, facilitating VLAN traffic across switches.

- Inter-VLAN Routing

Inter-VLAN routing enables devices on different VLANs to communicate. This can be achieved via router-on-a-stick or multilayer switches.

Sample Question:

Which device performs inter-VLAN routing in a switched network?

Answer:

Layer 3 switch or router

Explanation:

Since VLANs are separate broadcast domains, a Layer 3 device routes traffic between them.

- WAN Technologies

CCNA 2 also covers WAN connectivity options such as PPP, Frame Relay, and MPLS.

Sample Question:

Which WAN protocol encapsulates multiple Layer 3 protocols over serial links?

Answer:

PPP (Point-to-Point Protocol)
