While groundbreaking, the 1978 edition also had limitations:

- Limited technological insights: As it predates advanced analytical methods, some chemical constituents and plant identification techniques are outdated.
- Regional focus: The focus is primarily on plants known at the time, with less coverage of newer discoveries or plants from non-Western regions.
- Evolving nomenclature: Botanical and chemical nomenclature has since been standardized or revised, leading to discrepancies with current terminology.

Despite these, its historical importance remains undeniable.
