Diagrams of ocular anatomy and physiology enhance retention. Practice drawing or reviewing labeled diagrams.

- Break Down the Question
- Read the question carefully.

- Identify keywords (e.g., ?injury,? ?blockage,? ?degeneration?).
- Determine what the question is testing: anatomy, physiology, pathology?

- Eliminate Clearly Wrong Options

Narrow choices by ruling out options that are anatomically or physiologically implausible.

- Connect Concepts

Relate basic science facts to clinical scenarios to improve understanding and recall.

Sample MCQ Breakdown and Analysis

Question:

Which structure is primarily responsible for draining aqueous humor from the anterior chamber?

- a) Canal of Schlemm
- b) Vitreous body
- c) Ciliary body
- d) Retina

Analysis:

- Step 1: Identify the keyword: ?draining aqueous humor.?
